

Senior AI/ML Engineer with 6 years of experience building applied ML and GenAI systems for enterprise use cases. Strong background in ML, NLP, transformers, LLM applications, and AI system design, with hands-on ownership from problem formulation and experimentation through scalable implementation. Led a 3-person team delivering ML capabilities across 15+ global markets and built LLM-powered analytics and agentic optimization systems.

Technical Skills

Languages	Python, SQL
AI / ML	Machine Learning, Deep Learning, NLP, Transformers, LLMs, RAG, PEFT/LoRA, Embeddings, Search, Kalman Filter, Optimization
AI Systems	LangGraph, Vector Databases, FastAPI, Docker, MLflow, CI/CD, Git
Data / Apps	Snowflake, Pandas, NumPy, Streamlit, Supabase

Education

Indian Institute of Information Technology, Ranchi

July 2020

Bachelor of Technology, Computer Science & Engineering

Professional Experience

Tiger Analytics

Senior AI/ML Engineer

Hyderabad

Oct 2021 – Present

- **ROI Engine - Kalman Filter-Based Market Mix Modeling:** Led a 3-person technical team to design a state-space MMM platform used to measure the impact of \$500M+ in annual media spend across a variety of products.
- Engineered a reusable pipeline architecture that extended the core modeling workflow to 15+ global markets, reducing on-boarding time from 12 weeks to under 4 weeks.
- **Luma - Automated MMM Insight Engine:** Built a full-stack LLM analytics platform that converts complex marketing-performance movements into business-facing explanations; introduced a deterministic computation layer that validates metric relationships before LLM generation, removing numerical hallucination as a failure mode.
- **Spool - Natural Language to OR Code:** Built a LangGraph-based multi-agent system that translates natural-language optimization problems into executable OR-Tools Python, covering constraint parsing, model assembly, and solver configuration.

Carelon Global Solutions

Associate AI Engineer

Hyderabad

Sep 2020 – Oct 2021

- **Pratilipi - Meeting Intelligence Platform:** Built an end-to-end NLP pipeline that generated structured meeting minutes, reducing manual documentation effort by ~40%.
- Fine-tuned transformer models for summarization and sentiment classification and integrated a computer-vision keyframe extraction module for post-meeting review.

Vassar Labs

ML Engineer Intern

Hyderabad

Jan 2020 – Aug 2020

- **Crop Classification:** Developed an LSTM-based crop classification model for a state-level satellite imagery intelligence

Bungee Tech

Data Science Intern

Remote

Nov 2019 – Dec 2019

- **E-commerce Catalog De duplication:** Applied BERT embeddings for semantic entity matching across a large scale e-commerce product catalog, reducing duplicate listings by 30%.

Projects

Sila: Local-First Multimodal AI Media Organizer

[GitHub](#)

- Designing a local-first multi-modal retrieval system for filmmakers and photographers, with automated media ingestion, multi-modal embeddings, semantic search, and natural-language discovery without manual tagging.

Vaak: AI-Powered Synthetic Speech & Voice Deepfake Detector

[GitHub](#)

- Building an AI-powered audio analysis system that detects synthetic and manipulated speech, using pretrained speech representations and a modular deep learning pipeline for real-world audio classification.
